

# T-2 ON-OFF TOOL

Completion Accessories

## PRODUCT OVERVIEW

Giant Oil Tools T-2 On-Off Tool enables the tubing string to be disconnected above a packer for tubing retrieval, zonal isolation, and fluid circulation.

There are two basic components to the tool. The T-2 Overshot is mounted on the tubing string and the stinger is mounted on the packer. The standard configuration overshoot disengages with a quarter turn left hand rotation. Right hand release is available.

The washover shoe on the overshoot can cut through debris, allowing for easy engagement of the stinger. The seals in the tool are retrieved with the overshoot to enable redressing on surface.

The stinger is available with all common wireline profiles and works with industry standard wireline tools.

## FEATURES & BENEFITS

- Enables a packer to be used as a bridge plug for zonal isolation or temporary abandonment of lower zones.
- Can be fully pressure tested on surface.
- The tool can be pinned in a shear-up or shear-down position, providing compatibility with the packer setting and retrieving style.
- Bonded seals allow for multiple disconnections with reduced risk of damage.
- Non-welded jay skirt.
- Check with your Giant Oil Tools representative for more information
