

## PRODUCT OVERVIEW

Giant Oil Tools Tubing Pump-Out Plug provides a simple and economical method to temporarily plug a tubing string. It can be used to apply pressure to activate certain hydraulically activated tools.

The Pump-Out Plug is available in both Solid Core and Ball and Seat configurations. Solid Core equipped tools are well suited for snubbing applications. Ball and Seat equipped tools allow for the tubing to fill along with the annular fluid level.

The pump-out pressure is easily adjustable in the field by adding or removing shear pins. The pump-out pressure can also be customized to meet your specific requirements.

## FEATURES & BENEFITS

- Simple and effective way to plug the tubing in order to generate differential pressure
- Tubing string ID maintained (no restrictions)
- Metallurgy compatible with service environment
- Available in a variety of material grades
- Available with all API and most premium thread connections
- Customizable to your specific requirements
- Check with your Giant Oil Tools representative for more information
